

## **TIMBER STAND-VEGETATION COVER MAPS**

**5627**

(May 1988)

These seven and one-half minute quadrangle maps, with a scale of two inches to the mile, were prepared from aerial photo interpretation and fieldwork. They show broad timber and other vegetation types, total cover classes of all woody vegetation and of commercial timber, and age classes of the latter. General legends were prepared to accompany these maps. Timber stand-vegetation cover maps were produced in conjunction with soil-vegetation surveys for Humboldt, Glenn, Lake, Mendocino, and Tehama counties only. This project makes timber stand-vegetation cover maps of many other parts of California from earlier surveys available to the department and to the public.
