

SOIL-VEGETATION MAPS

5628

(May 1988)

Using aerial photo interpretation and intensive field work, seven and one-half minute quadrangle maps [at a scale of two inches to a mile (1:31,680) or one inch to 2000 feet (1:24,000)] are prepared. These maps show soil series and phases, predominant woody vegetation species, and timber site classes within each delineated soil-vegetation unit. A separate legend for each quadrangle is prepared giving soil characteristics, estimates of relative soil suitability for various uses, species of plants mapped and observed, range vegetation information at selected representative plot sites, and the classification of the soils according to Soil Taxonomy for maps produced since 1972.
