

USE OF EMERGENCY WARNING DEVICES

6781

(January 1988)

Since it is difficult to establish degrees of emergencies, whenever a vehicle is responding to an emergency, all its warning devices shall be used. At times (other than in emergency situations) it may be more desirable to use the rear-facing amber light in lieu of the rotating red or the rear-facing red light. For example, when moving a slow transport up a grade on a multi-lane highway, the driver would want overtaking vehicles to be cautious but not necessarily remain behind or stop. Also, parked vehicles working along a roadside might display the amber light as a precautionary measure. In all cases the safety of the traveling public is the deciding factor of all actions when responding to an emergency.
