

ROLLOVER PROTECTION SYSTEM (ROPS)

6806

(No. 1 June 1989)

ROPS is a special type of roll cage/roll bar structure used on certain CDF vehicles. Any physical modification to the ROPS nullifies its safety certification. There will be absolutely no drilling, welding, etc., done to any rollover protection system. If a repair or change is necessary, the local FEM will contact a mechanical engineer qualified to recommend either repair or replacement. New ROPS must be purchased from manufacturers who can provide certified ROPS for the specific vehicles requiring them.
