

## **REUTILIZATION (25X)**

**6861**

**(January 1988)**

CDF reutilizes fire engines in its inventory to maintain an internal source of replacement Conservation Camp fire engines. When the assignment of a 25X fire engine is required, MEM processes the appropriate survey documents, establishes an inventory record (i.e., key sort card), and releases the 25X to the assigned location via the CDF release process. A special vehicle release form is used showing or designating an internal inventory change and the location. Conservation Camp protection fire engines will be updated as needed to maintain reliability.
