

FIX-N-FAX #91

CALIFORNIA DEPARTMENT OF FORESTRY AND FIRE PROTECTION

No. 91

Date: April 1979

Construction Equipment - Special Lubrication and Operating Instructions

The following Merit Award suggestion, submitted by Region IV Forestry Equipment Manager II Lew Smith, has been reviewed and adopted as a field option.

THE SUGGESTION:

Make copies of the lubrication specifications, and copies of special requirements such as tire rolling diameter on AW graders. Make these copies on full-size, 8 ½ X 11" white Texoprint (372M BS112) paper. This is an extremely durable paper manufactured by Kimberly Clark Paper Company. An equally durable paper may be used. Staple these instructions inside the back cover of the Mobile Equipment Maintenance Procedures 2600 handbook.

This addition to the 2600 Handbook, which stays with the equipment at all times, provides ready reference for needed information. Copies made with Texoprint paper are moisture, oil, and grease resistant and can be folded repeatedly without damage. Full page copies of lube charts are needed for legibility and can be made on State copying machines.
