

## FIX-N-FAX #107

### CALIFORNIA DEPARTMENT OF FORESTRY AND FIRE PROTECTION

No. 107

Date: December 1985

#### **Transport and Bulldozer Grab Handles and Anti-Slip Surfaces**

Some transports and bulldozers lack adequate grab handles and working surfaces are in need of anti-slip material to prevent slips and falls. Since transports and bulldozers vary so much, because of different years models, different manufacturers, location of tool boxes, step areas, etc., we ask that the Heavy Fire Equipment Operator responsible for each unit, work with the Forestry Equipment Manager to devise solutions for these problems, and make corrections as necessary.

Caution should be used not to weld or drill on the structural components of the R.O.P.S. on bulldozers.
