

PORTABLE RETARDANT BASES

8357

(Revised September 2001)

Portable retardant bases (sometimes called mobile retardant bases or MRB's) with varying capabilities are available from a number of vendors. Dependant on the specific contractor capabilities available systems can deliver liquid concentrate or powdered type retardants at delivered gallons of up to 21,000 gl. per hour. All systems are easily transportable and can be established at airports or other incident locations to support fixed or rotary wing operations.

For annual listing of specific capabilities and needs see the exhibit Portable Retardant Base Contractors (*coming soon*).
